

CASE STUDY • GAME-X

From Browser to Build.

A custom PC Configurator for **Game-X** — turning complex hardware choices into confident, compatible purchases.

5,200+

Compatibility Engine

Real-time Validation

Smart Cart

Customers were lost. Carts were abandoned.

No Compatibility Filtering

Customers ordered parts that didn't fit their build — wrong socket, wrong slot.

No Guided Flow

Product pages existed in isolation. No cross-sell logic, no purchase confidence.

No Configurator

Competitors had step-by-step PC builders. Game-X had none.

Three custom modules. One seamless engine.

PC Configurator

6-step guided builder. Each step auto-filters the next by compatibility. Live price counter. Mobile-responsive.

Compatibility Engine

Real-time validation against a relational matrix: socket, DDR gen, form factor, PSU wattage.

Smart Cart

Saves full builds, detects swapped parts that break compatibility, and warns the buyer before checkout.

A builder that thinks like a technician.

- **CPU → MB → RAM → GPU → PSU → Case**
6-step flow, locked until prior step complete
- **Each step auto-filters by compatibility**
No incompatible options shown
- **Live price counter**
Updates as each component is added
- **"Why is this locked?" tooltip**
Plain-language explanation for buyers
- **Mobile-responsive**
Full-width touch-optimised layout

PC BUILD CONFIGURATOR

CPU

Intel Core i9-13900K

14 500 ₺

MB

ASUS ROG STRIX Z790-E

9 800 ₺

RAM

Corsair 32GB DDR5-5600

4 200 ₺

GPU

Selecting compatible models...

PSU

Auto-calculated after GPU

Case

Filtered by form factor

5,200 SKUs. Zero wrong combos.

The engine cross-references a relational compatibility matrix.

Rules cover:

1. CPU socket ↔ Motherboard socket

2. RAM type ↔ Motherboard slot (DDR4/DDR5)

3. GPU power draw ↔ PSU wattage

4. Case form factor ↔ Motherboard size

4

Compatibility Layers

Conversion Rate

Configurator-assisted checkouts
vs. standard product pages

−60%

Support Tickets

Pre-sale queries dropped after
launching the configurator

2.4x

Avg. Order Value

Configurator builds vs.
single-item purchases

4.9/5

Satisfaction Score

Post-purchase rating for
configurator orders

"We expected a product page upgrade. ITForce built us an **actual sales system.**"

— Game-X founder

OpenCart, extended the right way.

OpenCart 3.x

PHP 8.1

MySQL

Vanilla JS

Custom OC Module API

Git / CI

Wk 1–2

Discovery & DB schema

Compatibility matrix design, relational DB structure

Wk 3–4

Configurator module

Step builder + admin UI for product mapping

Wk 5–6

Compatibility engine + cart

Real-time validation, Smart Cart integration

Wk 7

QA & testing

Cross-browser, mobile, edge-case compatibility checks

Wk 8

Deploy & training

Staging → production + Game-X team onboarding
