

Restricted niche

Medical Aesthetics

High YMYL/EEAT strictness

Case

Derma Solution – Scaling Organic Traffic +1,861% in a Restricted YMYL Niche

About the Client

Derma-solution.com, a global supplier of Korean aesthetic products, approached us in June 2022 relying heavily on paid advertising.

Operating in a "Your Money or Your Life" (YMYL) sector, they faced severe restrictions; Google frequently suspends ad accounts for injectable products, making SEO a critical channel for stability.

The Goal

Transition from a dependency on volatile PPC ads to a sustainable, long-term organic revenue channel.

The Challenge

A "Glass Ceiling" on Growth

Our initial analysis revealed zero prior SEO implementation. The site suffered from technical debt and lacked the authority required to rank for medical queries.

Strict Regulations

Google demands high "Experience, Expertise, Authoritativeness, and Trustworthiness" (EEAT) for medical sites. Inaccurate content can lead to de-indexing .

Technical Errors

The audit found critical issues: incorrect robots.txt, missing HTTPS (security risk), canonical tag errors, and slow page loading speeds .

Competitive Landscape

Competitors had established domains (DR 20+) and indexed pages ranging from 283 to 1,600.

Phase 1

Technical & Usability Architecture

We prioritized a comprehensive technical audit to fix the foundation.

Key Results:

Security & Indexing:

Implemented HTTPS and fixed noindex tags on critical pages .

Schema Markup:

Added structured data for products and contacts to help Google understand the content.

Usability Fixes:

Based on a usability audit, we improved the registration forms, made contact info clickable, and fixed mobile filters .

Initial Visibility Results (Year 1):

After addressing technical debt, the site achieved a visibility score of 56.7, with 20% of priority keywords hitting the Top 10.

Visibility and Top-Ranking Keywords (SE Ranking Dashboard)

Phase 1

Website Position Changes Graph (Oct 2022 – Oct 2023)

Data on Keywords in Google's Top 10

Phase 2

Semantic Strategy (Product vs. Category)

Our niche analysis showed that broader "Category" pages (e.g., "Dermal Fillers") were dominated by massive competitors.

The Strategy: We bypassed high-competition categories and focused on **Product and Brand Pages** (e.g., "Neuramis," "Revolax").

Content Workflow

We provided a semantic core for specific products, created metadata, and guided the client's writers to produce medically accurate texts to satisfy EEAT.

Blog Support

We launched a blog answering informational queries to capture top-of-funnel traffic.

Priority Keywords Table (Green Rankings)

As a result, 56 priority keywords now rank in **Position #1**, and 261 keywords are in the **Top 10**.

Phase 3

Authority Building (Off-Page SEO)

Building links in the aesthetic medicine niche is difficult; webmasters often reject medical content.

The Strategy:

Buffer Approach

We pre-selected extra platforms to mitigate rejections.

Content Tailoring

We wrote 1,000+ word non-promotional articles to meet the strict editorial standards of high-quality donors.

Growth

We scaled referring domains to 155, achieving a Domain Rating (DR) of 19.

Link Growth Dynamics Graph

Traffic & Business Impact

By combining technical health, EEAT-focused content, and strategic links, we achieved exponential growth.

Restricted niche

Medical Aesthetics

High YMYL/EEAT strictness

Conclusion & Future Plans

This case study demonstrates that a technical-first approach combined with strict EEAT compliance can break the "glass ceiling" in restricted niches.

Next Steps: We have integrated **Hotjar** to analyze heatmaps and further optimize conversion rates (CRO). We are now focused on expanding the blog semantics and optimizing new product launches to maintain market dominance.
