# Skin Reboot – Scaling Revenue +693% via SEO & PMax

## About the Client

**Skin-reboot.com** is a supplier of professional Korean medical-aesthetic products (fillers, meso-injections, and cosmeceuticals).

They operate in a niche where innovation and product quality are paramount, competing against established players with large content volumes.

Client:

Market:

Traffic  
**+91.58%**

Conversions  
**+134.12%**

Total Revenue:  
**+693.8%**

ROAS  
**17.51**

## Semantic Core Expansion

Our initial focus was on a balanced content approach across all product segments.

From July to October 2025, we observed a sharp increase in queries, directly resulting from active link building and content indexing.

## Part 1: SEO Strategy & Organic Growth

### Key Results:

#### TOP 10 Saturation:

We gained 18 new queries in the TOP 2-3 and added +85 queries to the TOP 10 overall.

#### Commercial Intent:

High-value commercial queries moved from "No Data" directly to TOP 3, driving targeted traffic.

#### Authority Building:

The rise from TOP 100+ to TOP 3 confirms that our content strategy successfully built the domain authority needed to rank in this competitive "Your Money, Your Life" (YMYL) niche.

## Part 1: SEO Strategy & Organic Growth

# Link Building Strategy

We initiated active link building in April 2024 with a focus on quality over velocity.

- **Backlinks Acquired:** 350+ from ~130 quality donors.
- **Domain Rating (DR):** Increased from 3 to 9.
- **AI Visibility:** The brand appeared in ChatGPT search results 7 times, confirming high trust signals.

The chart demonstrates a stable, gradual increase in referring domains without risky spikes.

This "safety-first" approach protected the young domain while steadily building the authority required for organic growth.

# Organic Traffic Performance

The site was launched for indexing in **April 2024**.

After correcting critical technical errors, we established a clear upward trend.

### Growth Correlation:

The acceleration in donor domain acquisition coincided perfectly with our peak traffic growth.

### User Engagement:

Engaged sessions almost **doubled (+91.58%)**, and Average Session Duration increased by **+87.72%** (to 2m 06s). This proves the traffic is not just higher volume, but significantly higher quality.

### Financial Impact:

The **+693.8%** growth in Total Revenue is the standout metric. The organic channel has transformed from a passive traffic source into a high-profit asset, confirming that our focus on content quality and technical health effectively converts visitors into buyers.

## Campaign Architecture

### Phase 1

Search & Shopping campaigns.

### Phase 2 (Week 3)

Performance Max (PMax) with full Product Feed integration

#### Advertising campaigns

Competitor analysis showed that the most relevant competitors focus their main advertising resources on product and search displays in Google. Therefore, we proposed launching Search and Shopping advertising campaigns for the client. After 3 weeks of running the Search and Shopping campaigns, we also launched Performance Max with a product feed.

#### Conversion Strategy:

Initially, we optimized for **Add\_to\_Cart** to gather data volume.

After 1.5 months of algorithm training, we switched the primary goal to **Purchase** to maximize ROAS.

## Optimization & Execution

### General Adjustments

- Bidding:** The acceleration in donor domain acquisition coincided perfectly with our peak traffic growth.
- Filtering:** Suspended wholesale campaigns and low-performing geographic regions (Geo 2) to consolidate budget on high-ROI areas.
- Negative Keywords:** Aggressive exclusion of non-target queries to reduce wasted spend.

### Search Campaign Refinements

- Ad Quality:** Enhanced responsive search ads with promo extensions (-12% First Order, -30% Black Friday).
- Granularity:** Created separate URLs for high-value keywords to improve Quality Score.

### Merchant Center & PMax Optimization

- Feed Health:** Regular resolution of "Disapproved" products and optimization of Titles/Descriptions for search relevance.
- Asset Groups:** Launched new PMax asset groups targeting specific search themes and audiences (e.g., "Added to cart < 30 days").
- Exclusions:** Pruned ineffective asset groups and irrelevant placements.

## Tracking & Analytics

-  **Enhanced Conversions:** Configured to improve data accuracy.
-  **Primary Goal:** "Purchase" (Ads).
-  **Secondary Goal:** "Add to Cart" (used for audience signal collection).

-  **Clarity:** Installed Microsoft Clarity to analyze user behavior and heatmaps.

### Part 3: Advertising Results

## Overall Performance (Sept 2024 – Oct 2025)

Impressions

2,920,719

Clicks

50,036

Conversion Rate

3.62%

Excellent for E-commerce

ROAS

15.04

### Part 3: Advertising Results

## Period Comparison (Scaling Efficiency)

Comparing the current optimized period (Apr–Oct 2025) vs. the previous period:

Conversion Value  
**+108.53%**

Conversions  
**+134.12%**

Profitability  
**+33.94%**

Cost Per Conversion  
**33.50%**

We successfully scaled spend (+55%) while decreasing the cost per acquisition (-33%). This widening gap between Cost and Value indicates a highly healthy, scalable account.

## Part 3: Advertising Results

# Channel Profitability

Performance Max emerged as the dominant driver of growth:

PMax ROAS
